Portfolio: resume-theta-liard.vercel.app

PROFESSIONAL SUMMARY

BCA (Information Technology) student and hands-on software developer focused on native Android development and Java Spring Boot backend engineering. Experienced in building practical mobile and server-side systems using REST APIs, PostgreSQL, JWT authentication, Firebase services, Retrofit/OkHttp and third-party integrations. Currently developing real-world applications including Splity and Attendifi, with additional exposure to Angular for web dashboards and service-management workflows.

TECHNICAL SKILLS

Android	Java, XML, Android Studio, Android SDK, Activities, RecyclerView, CameraX, ML Kit Face Detection
Backend	Java, Spring Boot, Spring Web, Spring Data JPA, REST APIs, DTOs, Controller-Service-Repository architecture
Security & Auth	JWT, Spring Security, Email/Password Authentication, Firebase Authentication, OTP workflows
Databases	PostgreSQL, MySQL, SQLite, Firebase Firestore, SQL, JPA/Hibernate
Integration	Retrofit, OkHttp, JSON, Razorpay, MSG91, Firebase Cloud Messaging, Zoho Forms Webhook
Web / Tools	HTML, CSS, Angular (basic), Git, GitHub, Gradle, Postman, ngrok, IntelliJ IDEA, VS Code

PROJECTS

Splity | Group Expense & Utility Management Android Application

- Developing a group-based Android platform where users join groups using a group code and manage shared activities.
- Implemented group communication including group profiles, member management, messaging and multiple message/media types.
- Built expense-splitting workflows with wallet, bill-payment and travel-booking modules using REST API integration.
- Developed Java/Spring Boot backend services with PostgreSQL persistence and integrated Razorpay and MSG91 services.
- Worked with Retrofit/OkHttp, Android UI components, RecyclerView and Firebase services for application functionality.

Tech Stack: Android (Java, XML), Spring Boot, REST APIs, PostgreSQL, Retrofit, OkHttp, Firebase, Razorpay, MSG91

Attendifi | Company & Employee Attendance Management System

- Built an attendance-management system with company registration, admin and employee workflows backed by Spring Boot and PostgreSQL.
- Implemented registration, company registration, login and JWT-based validation using Spring Security.
- Designed user/company data models with PostgreSQL and Spring Data JPA, including company-code based onboarding.
- Developed Android admin/employee workflows using Java, XML and Retrofit for backend communication.
- Integrated CameraX and ML Kit Face Detection for face-based attendance, including multi-angle capture before first punch.
- Configured and tested Gradle-based Android/Spring Boot projects and REST endpoints using Postman and local network tunnelling.

Tech Stack: Java, Spring Boot, Spring Security, JWT, PostgreSQL, JPA/Hibernate, Android, XML, Retrofit, CameraX, ML Kit, Gradle

Scentmatic | Service Management System

- Developing an Angular dashboard with Spring Boot backend and PostgreSQL database for fragrance-machine service management.
- Designed machine and service-history models and REST endpoints for machine listing, creation and updates.
- Automated refill due-date calculation from technician service data through a Zoho Forms webhook workflow.
- Implemented backend business logic for service history, machine configuration and calculated due dates.

Tech Stack: Angular, Java, Spring Boot, PostgreSQL, REST APIs, Zoho Forms Webhook

Shipment Tracking System | Backend & OCR Workflow

- Developed a Spring Boot shipment-tracking workflow with an OCR service component for extracting text from shipment images.
- Structured backend processing using service-layer logic and REST-oriented architecture.

Tech Stack: Java, Spring Boot, REST APIs, OCR, PostgreSQL

EDUCATION

Bachelor of Computer Applications (BCA) – Information Technology

Meri College of Engineering, Maharshi Dayanand University (MDU) • Expected 2027

Relevant areas: Data Structures, Database Systems, Software Development, Computer Applications

ADDITIONAL TECHNICAL EXPERIENCE

- Android development using Java/XML with Activities, RecyclerView, Material UI components, CameraX and Firebase services.
- Spring Boot backend development using Controller → Service → Repository architecture, DTO-based requests, JPA/Hibernate and PostgreSQL.
- REST API development and testing using JSON, Retrofit/OkHttp and Postman.
- Authentication workflows including OTP, JWT validation and role-oriented application access.
- Development/deployment exposure using GitHub, Vercel, ngrok, IntelliJ IDEA, Android Studio and VS Code.
